Chemical engineering is **everywhere!**

How many times today have you used something that depends on **chemical**, **biochemical** or **process engineering**?

Did you...

- wash your hair?
- shower?
- take medicines, vitamins or supplements?
- flick a switch to turn the power on?
- eat food?
- pull on a pair of jeans?

- use a smartphone or tablet?
- use deodorant, moisturiser or make up?
- feed your pet?
- drink water?
- travel on a bus or in a car?

Chemical engineering is all around you and every minute of every day you are within reach of something that depends on chemical, biochemical or process engineering for its existence. Chemical engineering is about developing, innovating and improving sustainable processes across a range of industries and across the world.
