

Chemical engineering is everywhere!

How many times today have you used something that depends on **chemical**, **biochemical** or **process engineering**?

Did you...

- shower?
- wash your hair?
- use deodorant, moisturiser or make up?
- pull on a pair of jeans?
- eat food?
- drink water?
- take medicines, vitamins or supplements?
- feed your pet?
- travel on a bus or in a car?
- use a smartphone or tablet?
- flick a switch to turn the power on?

Chemical engineering is all around you and every minute of every day you are within reach of something that depends on chemical, biochemical or process engineering for its existence. Chemical engineering is about developing, innovating and improving sustainable processes across a range of industries and across the world.
