

## **Vignette Guidelines**

### **History of Chemical Engineering in Australasia**

#### **Background**

IChemE's Australian office is collecting information of an historical nature, on the development and growth of chemical and process engineering in Australia. The purpose is to tell Australia's story on how the profession evolved.

IChemE invites members to share their knowledge of historical value that could involve, plant, process, person, university or organisation. It might involve a new technology at the time of setting up of a new facility or academic course.

The aim is to collect and share these vignettes with members.

#### **What is required:**

- Word count: approx 500 words
- Brief biography details of author
- Include images if available
- If pictures are from a photo they should be scanned to a high resolution.

For further information or clarification please contact me on +61 3 9642 4494

We'd like to read your story. Or if you know someone else who might have an interesting historical chemical or industrial chemistry story to tell, please pass this on.

Peter Slane

IChemE Director Australasia
